

SESSION - 8

Test Scenarios, Detailed Test Cases, and Manual Scripts

1. Pick any one feature from a popular app you use (for example, 'Add to Cart' in Flipkart or 'Send Message' in WhatsApp) and write 5 high-level test scenarios for it. List each scenario clearly.

Feature: Send Message in WhatsApp

High-Level Test Scenarios

- **Scenario 1:** Verify that a user can send a text message to a contact.
** Check that the message is delivered successfully.*
- **Scenario 2:** Verify that a user can send a message when internet connectivity is available.
** Ensure the message reaches the recipient without errors.*
- **Scenario 3:** Verify that a user receives an appropriate status when there is no internet connection.
** Check that the message remains pending and is sent once connectivity is restored.*
- **Scenario 4:** Verify that a user can send different types of messages.
** Test text, images, videos, documents, and voice messages.*
- **Scenario 5:** Verify that sent and delivered indicators are displayed correctly.
** Check single tick (sent), double tick (delivered), and blue ticks (read, if enabled).*

2. For the 'Search Restaurant' feature in a Zomato-like app, write 10 specific test scenarios covering both functional and non-functional aspects.

Zomato-like App: Search Restaurant Scenarios

Scenario ID	Test Scenario	Type
TS_01	Verify that a user can search for a restaurant using a valid restaurant name.	Functional
TS_02	Verify that search results are displayed for a partial restaurant name (e.g., "Mc" for McDonald's).	Functional
TS_03	Verify that relevant results are displayed when searching by cuisine type (e.g., Pizza, Chinese, South Indian).	Functional
TS_04	Verify that filters (Rating, Cost, Distance, Veg Only, etc.) are applied correctly to search results.	Functional
TS_05	Verify that an appropriate message is displayed when no restaurants match the search criteria.	Functional
TS_06	Verify that the search feature handles special characters, numbers, and blank inputs correctly.	Functional
TS_07	Verify that search suggestions/autocomplete appear while the user types in the search box.	Functional
TS_08	Verify that search results are displayed within the acceptable response time (e.g., less than 3 seconds).	Non-Functional (Performance)
TS_09	Verify that the search screen and results display correctly on different screen sizes and devices.	Non-Functional (UI/Compatibility)
TS_10	Verify that the search feature works smoothly under high user load without crashes or delays.	Non-Functional (Load/Performance)

3. Choose one scenario from your Zomato 'Search Restaurant' scenarios and convert it into 5 detailed test cases. Each test case should include: Test Case ID, Steps, Test Data, Expected Result, and Actual Result (leave Actual Result blank).

Detailed Test Cases (Scenario: Search Filters Validation)

TC ID	Steps	Test Data	Expected Result	Actual Result
TC_01	1. Open the app. 2. Search for "Pizza". 3. Apply Rating > 4.0 filter.	Search: Pizza Rating Filter: 4.0+	Only restaurants with ratings greater than 4.0 are displayed.	_____
TC_02	1. Open the app. 2. Search for "Burger". 3. Apply Cost for Two < ₹500 filter.	Search: Burger Cost Filter: ₹500	Only restaurants with cost for two less than ₹500 are displayed.	_____
TC_03	1. Open the app. 2. Search for "South Indian". 3. Apply Distance < 5 km filter.	Search: South Indian Distance Filter: 5 km	Only restaurants within 5 km are displayed.	_____
TC_04	1. Open the app. 2. Search for "Restaurant". 3. Apply Veg Only filter.	Search: Restaurant Filter: Veg Only	Only vegetarian restaurants are displayed in the results.	_____
TC_05	1. Open the app. 2. Search for "Pizza". 3. Apply Rating > 4.0 and Veg Only filters together.	Search: Pizza Rating: 4.0+ Veg Only	Results display only vegetarian restaurants with ratings above 4.0.	_____

4. Download or create a simple test case template in Excel or Google Sheets. Fill it with 4 test cases for the 'Add to Playlist' feature in a Spotify-like app, using the columns: Test Case ID, Scenario, Steps, Test Data, Expected Result.

Spotify-like App: Add to Playlist Test Cases

Microsoft Excel - Spotify_Test_Cases.xlsx					
fx Add to Playlist Feature Template					
	A	B	C	D	E
1	Test Case ID	Scenario	Steps	Test Data	Expected Result
2	TC_01	Add a song to an existing playlist	Open song > Click Add to Playlist > Select existing playlist	Song: Shape of You Playlist: Favorites	Song is added successfully to the selected playlist
3	TC_02	Add multiple songs to a playlist	Select multiple songs > Add to Playlist > Choose playlist	3 songs Playlist: Road Trip	All selected songs are added to the playlist
4	TC_03	Create a new playlist while adding a song	Open song > Add to Playlist > Create New Playlist	Song: Blinding Lights Playlist: Workout Mix	New playlist is created and the song is added
5	TC_04	Prevent duplicate song addition	Add a song already present in playlist	Song: Believer Playlist: Favorites	System prevents duplicate entry or shows appropriate message

5. Write a basic test script (in plain English, not code) for the 'Login with OTP' feature in a Paytm-style app, describing the exact steps a tester would follow to manually test the OTP flow from start to finish.

Manual Test Script: Login with OTP Feature (Paytm-style App)

Test Objective: Verify that users can log in successfully using a valid OTP and receive an appropriate error message for an invalid OTP.

Test Script 1: Valid OTP Login

Precondition: User has a registered mobile number.

1. Open the Paytm-style application.
2. Tap on the **Login** button.
3. Enter a valid registered mobile number (e.g., 9876543210).

4. Click **Send OTP**.
5. Verify that an OTP is received on the registered mobile number.
6. Enter the received OTP in the OTP field.
7. Click **Verify/Login**.
8. Observe the result.

Expected Result: User is successfully authenticated, redirected to the home/dashboard screen, and no error messages are displayed.

Test Script 2: Invalid OTP Login

Precondition: User has a registered mobile number.

1. Open the application.
2. Tap on the **Login** button.
3. Enter a valid registered mobile number.
4. Click **Send OTP**.
5. Wait for the OTP to be received.
6. Enter an incorrect OTP (e.g., 123456).
7. Click **Verify/Login**.
8. Observe the result.

Expected Result: Login should fail. An error message such as "Invalid OTP" should be displayed, and user should remain on the OTP verification screen.

Test Script 3: Expired OTP Verification

1. Open the application and enter a valid mobile number.
2. Click **Send OTP**.
3. Wait until the OTP expires.
4. Enter the expired OTP.
5. Click **Verify/Login**.

Expected Result: Login should fail. An error message such as "OTP Expired" should be displayed, and user should be given an option to resend OTP.

Test Script 4: Resend OTP Verification

1. Open the application and enter a valid mobile number.

2. Click **Send OTP**.
3. Click **Resend OTP**.
4. Verify that a new OTP is received.
5. Enter the new OTP.
6. Click **Verify/Login**.

Expected Result: New OTP is received successfully. User can log in using the new OTP, and the old OTP becomes invalid.
