

Software Testing Life Cycle (STLC)

Complete Questions and Answers Document

Q1. List the 7 main phases of the Software Testing Life Cycle (STLC) and write one line describing what happens in each phase for a Login feature like the one in Instagram or Paytm.

ANS

STLC Phase	Example
1. Requirement Analysis	Instagram: Understand that users can log in using username, email, or phone number and password. Paytm: Understand that users can log in using a mobile number and OTP.
2. Test Planning	Instagram: Plan testing for login, forgot password, and account security features. Paytm: Plan testing for OTP generation, OTP verification, and session management.
3. Test Case Development	Instagram: Create test cases for valid login, invalid password, empty fields, and password reset. Paytm: Create test cases for valid OTP, invalid OTP, expired OTP, and resend OTP.
4. Test Environment Setup	Instagram: Install the Instagram test app and create test user accounts. Paytm: Set up the Paytm test application and test mobile numbers.
5. Test Execution	Instagram: Verify login with correct username and password and check error messages for invalid credentials. Paytm: Verify that the correct OTP allows login and an incorrect OTP shows an error.
6. Defect Reporting	Instagram: Report a bug if the app accepts an incorrect password and logs the user in. Paytm: Report a bug if an expired OTP is still accepted by the system.
7. Test Closure	Instagram: Prepare a report showing all Instagram login test cases passed successfully. Paytm: Confirm all OTP login test cases are completed and prepare the final test report.

Q2. For a Flipkart-style Login module, create a table that lists the entry and exit criteria for each STLC phase (Planning, Monitoring, Analysis, Design, Implementation, Execution, Reporting, Closure).

ANS

STLC Phase	Entry Criteria	Exit Criteria
1. Planning	Login feature requirements are available.	Test plan is created and approved.
2. Monitoring & Control 3. Requirement Analysis 4. Test Design 5. Test Implementation	- Testing activities have started. - SRS/requirements for Login module are received. - Requirements analysis is completed. - Test cases are approved.	- Testing progress is tracked and issues are resolved. - All login requirements are understood and reviewed. - Test cases and test data for login are prepared and reviewed. - Test environment and test accounts are ready.
6. Test Execution	Test environment and test cases are ready.	All login test cases are executed and defects are logged.
7. Test Reporting	Test execution is completed.	Test summary report is prepared and shared with stakeholders.
8. Test Closure	Testing and reporting are completed.	Final closure report is approved and testing is formally closed.

Q3. Write a sample Test Plan section (max 1 page) for the Login module of a Zomato-like app, including objectives, scope, resources, and schedule.

ANS

Test Plan - Login Module (Zomato App)

1. Objective

The objective of this testing is to verify that the Login feature works correctly and securely. Users should be able to log in using their registered mobile number, email, and password. The system should also display appropriate error messages for invalid login attempts.

2. Scope

In Scope:

- Login with valid credentials
- Login with invalid credentials
- Password validation
- Empty field validation
- "Forgot Password" functionality
- Error message verification

Out of Scope:

- User Registration
- Profile Management
- Food Ordering Features
- Payment Features

3. Resources

Role	Responsibility
Test Leader	Prepare test plan, monitor testing progress
Tester	Create and execute test cases, report defects
Developer	Fix reported defects
Product Owner	Review and approve requirements

Test Environment: Android Mobile App, Google Chrome Browser, Test User Accounts, Stable Internet Connection.

4. Schedule

Activity	Duration
Requirement Analysis	Day 1
Test Case Design	Day 2
Test Environment Setup	Day 3
Test Execution	Day 4-5

Activity	Duration
Defect Retesting	Day 6
Test Reporting & Closure	Day 7

5. Deliverables

- Test Plan Document, Test Cases, Defect Reports, Test Summary Report, Test Closure Report.

6. Exit Criteria

Testing will be completed when all critical login test cases have been executed, major defects are fixed, and the final test report is approved.

Q4. Design 3 test cases for the Login module of a BookMyShow-style app, covering positive, negative, and boundary scenarios. Include test steps, expected results, and actual results columns.

ANS

Test Case ID	Scenario Type	Test Steps	Expected Result	Actual Result
TC 01	Positive Test Case	1. Open BookMyShow app. 2. Enter valid Email/Mobile Number. 3. Enter valid Password. 4. Click Login button.	User should successfully log in and be redirected to the Home Page.	User successfully logged in and Home Page displayed. (Pass)
TC 02	Negative Test Case	1. Open BookMyShow app. 2. Enter valid Email/Mobile Number. 3. Enter incorrect Password. 4. Click Login button.	System should display an error message like "Invalid Username or Password" and should not allow login.	Error message displayed and login denied. (Pass)
TC_03	Boundary Test Case	1. Open BookMyShow app. 2. Enter Password with minimum allowed length (e.g., 6 characters). 3. Enter valid Email/Mobile Number. 4. Click Login button.	If the password meets the minimum length requirement and is correct, login should be successful.	Login successful with minimum-length valid password. (Pass)

Q5. After executing your test cases, write a short Test Summary Report for the Login module, mentioning how many tests passed, failed, and any major issues found.

ANS

Test Summary Report - Login Module (BookMyShow-Style App)

Project: BookMyShow Login Module | Testing Period: 10 June 2026-12 June 2026

Test Execution Summary

Total Test Cases	Passed	Failed	Blocked
3	2	1	0

Test Results

Passed Test Cases:

- Valid Login with correct username and password.
- Login with minimum valid password length.

Failed Test Cases:

- Invalid Password Test Case.

Major Issues Found:

- The application did not display a proper error message when an incorrect password was entered.
- Instead of showing "Invalid Username or Password", the system remained on the Login page without any message.
- This issue may confuse users because they do not know why the login failed.

Recommendations

- Fix the error message display for invalid login attempts.
- Retest the Login module after the defect is fixed.
- Verify that all validation messages are shown correctly.

Conclusion

A total of 3 test cases were executed. 2 test cases passed and 1 test case failed. One major defect related to invalid password handling was identified and reported to the development team. The Login module requires retesting after the defect is resolved.
