

SOFTWARE QUALITY ASSURANCE ASSIGNMENT

Testing Activities, RACI Matrix, and Role Management

Question 1

Pick any one app you use daily (like Zomato, Instagram, or Paytm) and list 6 specific testing activities you would perform before its latest feature release. For each activity, write 1 line describing what it checks.

Ans: App Selected - Instagram

Testing Activity	What It Checks
1. Functional Testing	Checks whether the new Story Filter works correctly and applies effects properly.
2. UI Testing	Verifies that buttons, icons, and screens are displayed correctly without alignment issues.
3. Performance Testing	Checks if the filter loads quickly and does not slow down the app.
4. Compatibility Testing	Ensures the feature works on different devices, screen sizes, and operating systems.
5. Security Testing	Verifies that user photos and personal data remain secure while using the feature.
6. Regression Testing	Confirms that existing features such as posting photos, reels, and messages still work correctly after the new feature is added.

Question 2

Create a responsibility matrix (RACI chart) for a test team working on a new Flipkart-style shopping cart feature. Include at least 4 roles: Tester, Test Leader, Developer, and Product Owner. Assign who is Responsible, Accountable, Consulted, and Informed for each of these activities: Test Planning, Test Case Design, Test Execution, Bug Reporting.

Ans: RACI Chart for Flipkart-Style Shopping Cart Feature

Legend: R = Responsible (Does work) A = Accountable (Final owner) C = Consulted (Gives input) I = Informed (Kept updated)

Activity	Tester	Test Leader	Developer	Product Owner
Test Planning	C	A, R	C	I
Test Case Design	R	A	C	I
Test Execution	R	A	C	I
Bug Reporting	R	A	C	I

Detailed Explanations

- Test Planning:** Test Leader (A, R) creates and approves the plan. Tester (C) and Developer (C) provide scoping inputs, while the Product Owner (I) receives updates.
- Test Case Design:** Tester (R) writes test cases for the shopping cart. Test Leader (A) reviews and approves them. Developer (C) explains technicalities and Product Owner (I) is kept aware of coverage.
- Test Execution:** Tester (R) executes cases and logs results. Test Leader (A) monitors overall progress. Developer (C) assists with structural bugs and Product Owner (I) tracks metrics.
- Bug Reporting:** Tester (R) files defects. Test Leader (A) manages lifecycle triage. Developer (C) resolves code fixes, while Product Owner (I) tracks critical delivery blockages.

Question 3

Write a brief job description (3-4 lines) for the role of a Test Leader in a team testing a new BookMyShow movie booking feature. Focus on daily responsibilities and decision-making areas.

Ans: Job Description - Test Leader (BookMyShow Feature)

A Test Leader in a team testing a new BookMyShow movie booking feature is responsible for planning and managing daily testing activities, including assigning tasks to testers and tracking progress. They review and approve test cases, ensure proper test coverage for features like seat selection, payment, and booking confirmation, and monitor defect reporting. The Test Leader also coordinates with developers and the Product Owner to clarify requirements and resolve issues. They make key decisions on testing priorities, release readiness, and risk management.

Question 4

Define a list of at least 5 testing activities needed for a small project to add a 'Dark Mode' toggle in a music app like Spotify. For each activity, specify whether it should be done by the Tester or Test Leader.

Hint: Think about planning, designing, executing, and reviewing tests for this feature.

Ans: Dark Mode Toggle Feature Activity Ownership

1. Test Planning

- **Activity:** Define testing approach, scope (settings screen, UI theme change, persistence), and timeline.
- **Assigned Role:** **Test Leader**

2. Test Case Design

- **Activity:** Create test cases for enabling/disabling dark mode, app restart behavior, and UI consistency across screens.
- **Assigned Role:** **Tester**

3. Test Data Preparation

- **Activity:** Prepare different device settings, OS versions, and user states (dark mode ON/OFF).
- **Assigned Role:** **Tester**

4. Test Execution

- **Activity:** Run test cases on the app by toggling dark mode and verifying UI changes across screens like home, player, and search.
- **Assigned Role:** **Tester**

5. Defect Review and Prioritization

- **Activity:** Review reported bugs (e.g., unreadable text, partial theme change) and decide severity/priority.
- **Assigned Role:** **Test Leader**

6. Test Monitoring & Reporting

- **Activity:** Track testing progress and prepare daily status reports on test coverage and defect status.
- **Assigned Role:** **Test Leader**

7. Regression Check Coordination

- **Activity:** Ensure dark mode changes do not break existing features like playback, login, or navigation.
- **Assigned Role:** **Test Leader**
